- Project Management
- Critical Thinking
- Problem-Solving
- Teamwork
- Creativity
- Leadership
- Agile Methodologies

About me

Passionate about software development, I define myself as a person with a great willingness to learn and continuously improve. I have experience leading multidisciplinary development teams and working on web and software projects in different sectors. My main focus is on creating efficient and scalable solutions, always seeking new technologies and methodologies that enhance my skills and improve team results.

Experience

SIRPREM

Software Architect

June 2024 - October 2024

Developed a system to manage economic aid requests for shelters for women victims of violence. I was in charge of the architecture, full-stack development, and deployment on Ubuntu Linux, using Next.js, Prisma, and PostgreSQL.

DEPI

Frontend Developer

December 2023 - June 2024

Worked on improving the interface for the page offering master's programs for DEPI. I also consumed an API in Express and connected an admin from Strapi for content management. The system was developed with Next.js and deployed on a Linux server.

Sandar Inmuebles

Fronted Developer

November 2023 - June 2024

Developed a web platform for publishing real estate listings in different parts of the country, using React as the main framework. Implemented Firebase and Firestore as a database, and multimedia resources were stored in Firebase.

SISOGEM

Software Architect

February 2023 - August 2024

Developed a system for the government of Michoacán that manages real-time meetings between various government bodies, generating a historical registry. The system was developed with React, utilizing AWS services like Amplify, S3, and SES for file storage, along with an API backend built in Express.

Educación

Instituto Tecnológico de Morelia

Software Engineering

August 2019 - Present

Specialized training in software development, focusing on systems web development and database management. Participation in real projects through the Software Academic Factory. Expected to graduate in 2024.
